SUMMARY

Software engineer who builds custom technology solutions end to end: from understanding the problem to putting it into production. I work in applied AI, full-stack and web development, combining technical judgment with product vision to deliver solutions that are clear, maintainable, and easy to document. Honorable Mention (Best Real-World Application) at Infosys InStep ProjectFest 2026. Education and experience in India, Colombia, Canada, and the United States; professional English proficiency.

EDUCATION

Universidad Autónoma de Yucatán Yucatán, Mexico
B.S. in Software Engineering (GPA: 88/100) August 2021 - June 2026
- **Key Coursework:** Algorithms and Data Structures, Mathematics for Computing, Advanced Programming, Software Engineering Principles, Database Systems, Mobile and Web Development, Distributed and Cloud Systems, Artificial Intelligence.

McGill University Montreal, Canada
Immersive English for STEM (SECIHTI Yucatán International Scholarship) July 2025 - August 2025
- Competitively selected among the top 100 university students in the state by the Government of Yucatán for a fully funded international STEM program at McGill University, focused on advanced technical communication in engineering contexts.
- Participated in industry immersion sessions at Google Montreal and Future Electronics, working directly with engineers on real-world systems design, product development, and innovation practices.

Universidad Pontificia Bolivariana Bucaramanga, Colombia
Exchange Semester in Systems and Computer Engineering July 2024 - November 2024
- **Key Coursework:** Mobile Development, UX/UI Design, Project Management, Distributed Systems.

EXPERIENCE

Independent Clients Yucatán, Mexico
Freelance Web Developer June 2026 - Present
- Design and develop websites for real clients, including Hunter BarberShop and the press kits for Mazza and Katas, translating each client's needs into responsive interfaces.

Infosys InStep Bengaluru, India
Software Engineering and AI Intern February 2026 – August 2026
- Designed and implemented **AI-Powered eKYC & Risk Intelligence on MOSIP**, an identity document verification system integrated into MOSIP's government-grade identity infrastructure, awarded *Honorable Mention – Best Real-World Application* at the Infosys InStep Annual ProjectFest 2026.
- Developed a multi-stage fraud detection pipeline combining metadata forensics, pixel-level tampering detection, OCR extraction with MRZ validation, and a document template system for structured field extraction via homography alignment.

PROJECTS

Full-Stack Pet Services Platform (Pets-Ride) December 2025
Software Development at UADY
- Designed and implemented a secure REST API in Node.js/Express, applying stateless JWT-based authentication with role-based access control and a normalized PostgreSQL schema to ensure transactional integrity in service bookings.
- Built a component-based frontend with React and Vite, applying a layered design system with Tailwind CSS and Material-UI, and centralizing API communication through Axios interceptors for consistent error and token handling.

AI Browsing Agent April 2026
Software Engineering and AI Intern at Infosys
- Built an agentic RAG system that crawls any URL using headless Chromium/Playwright, chunks and embeds the content with `all-MiniLM-L6-v2` into a FAISS vector store, and answers natural-language questions through a Groq-hosted LLaMA 3.3 70B model via a FastAPI backend with a Gradio frontend.

- Developed a multi-iteration agent loop with cosine-similarity link ranking to autonomously crawl relevant subpages when retrieval confidence falls below a threshold; implemented manual JSON-based tool calling to work around Groq's server-side parsing limitations, plus chunk deduplication across iterations to prevent context repetition.

CERTIFICATIONS AND AWARDS

Google Project Management Professional Certificate March 2025
Issued by Coursera, Authorized by Google
- Completed comprehensive training covering the full project management lifecycle, from initiation and strategic planning to execution, monitoring, and closure, with a specialized focus on applying Agile and Scrum frameworks to drive project success.

The Institute on Identity and Community Leadership Albuquerque, USA
The University of New Mexico June 2024 - July 2024
- Received a leadership scholarship from the U.S. Embassy in Mexico as 1 of 14 students selected nationwide, completing 80 hours of intensive training in community leadership, strategic planning, and cross-cultural collaboration at the University of New Mexico.

Capture the Flag Yucatán i6 2024 May 2024
Government of Yucatán
- Placed 3rd in Capture the Flag Yucatán i6 2024, competing in a live attack-defense environment, exploiting vulnerabilities in target systems while simultaneously hardening local infrastructure against active adversaries.

LEADERSHIP AND REPRESENTATION

Faculty of Mathematics, Universidad Autónoma de Yucatán
Student Council Representative February 2023 - January 2025
- Elected by my peers as the official student representative of the Faculty of Mathematics, participating in academic governance councils, fostering communication between students and administration, and supporting institutional improvement initiatives.

SKILLS

- **Programming and Databases:** Python, Java, C/C++, JavaScript, Dart, SQL, PostgreSQL.
- **Backend and Infrastructure:** Node.js, FastAPI, Express, REST API Design, JWT, PostgreSQL, Git, Linux.
- **AI and Machine Learning:** LangChain, PyTorch, FAISS (Vector Store), RAG Architectures, OpenCV, Ollama.
- **Systems Architecture and Security:** Distributed Systems, Multithreading, TCP/IP Sockets, Vulnerability Exploitation, System Hardening.
- **Languages:** Spanish (Native), English (Professional Proficiency).
